## EXECUTIVE SUMMARY

In the 2000 census data which was finalized by the Office of Management Budget on June 6, 2003, Morgantown, WV (along with nearby Preston County WV) was named a Metropolitan Statistical Area (MSA) for the first time. The population of the urbanized area within Monongalia County barely exceeds the population threshold to become a metropolitan area. The only reason that Morgantown reaches the 50,000 threshold within the urbanized area for population is because of West Virginia University (WVU) and a student population in excess of 21,000 students. Students generally in the age bracket from 15-24 use very high hospital services in comparison to the older age groups (most notably those 65 and older). Monongalia County's population, as a result of WVU has a much higher percentage of 15-24 year olds and a considerably lower percentage of those over age 65 than other areas of West Virginia. By examining the use rates for these various age groups (from CDC United States level of detail data) it is obvious for the purposes of hospital services Morgantown looks much more like a rural area than it does a metropolitan area.

Designating Morgantown as a metropolitan area has several detrimental impacts on payment levels for West Virginia hospitals. First, the rural wage index would be recomputed downward, leaving out WVU and Monongalia General Hospitals from the rural data. This results in a decrease in payment to all of the rural West Virginia hospitals (except those that are reclassified). Additionally, because of the new metropolitan area United Hospital in Clarksburg would no longer be eligible to be reclassified to Pittsburgh and would receive a lower Morgantown wage index as a result of a reclassification. Lastly, depending upon an administrative interpretation of rural referral centers that are now in an MSA it is possible that both WVU and Mon General could lose their reclassifications to Pittsburgh. The end result could reduce payment to West Virginia hospitals by as much as \$3,538,000.

We believe that the unique nature of a smaller urban "college town" such as Morgantown is such that it merits exclusion from being considered an MSA for the purposes of determining the Medicare wage index. Thus, preservation of Monongalia County as a part of rural West Virginia would be a more appropriate treatment for Medicare wage index purposes than simply accepting the MSA status as used by the U.S. Census Bureau.
